

SRIVATSAVA PUSARLA

Senior Product Manager · Applied AI, LLM Products, and Platform Strategy

srivatp2@gmail.com · (443) 868-4756 · Irving, TX · github.com/srivatp2-code

Impact: \$60B asset sales · \$25B TPV across 8 markets · 25 engineers led · Claude RAG and eval systems shipped

SUMMARY

Senior Product Manager with 8 years shipping applied AI and consumer products end to end. Ship Claude-powered RAG products, eval harnesses, deterministic guardrails, and human-in-the-loop workflows for high-stakes launches. Proven at scale in regulated FinTech where I led BNPL, credit, asset externalization, and repayment products at PayPal across 8 markets. Strongest at turning ambiguous customer, legal, risk, data, and engineering constraints into launch-ready platforms where trust, latency, cost, and quality tradeoffs decide outcomes.

EXPERIENCE

Senior Product Manager

Jun 2022 - Present

PayPal Inc. · BNPL, Credit, Asset Externalization, Repayments

Lead 2 product squads, 25 engineers

- Shipped a Claude-powered regulatory content platform in 1 week. RAG over policy and counsel-approved language, eval harness, deterministic guardrails, human-in-the-loop legal review. Engineering build targets an 80% cut in legal review turnaround and unblocks a 16-week per-market credit launch bottleneck.
- Built a Claude-powered Slack support agent that triages on-call issues using RAG over GitHub, Confluence, and prior threads. Doubled on-call throughput from 4 to 8 issues per day and returned engineering capacity to the roadmap.
- Owned the roadmap for asset externalization and enabled \$60B in BNPL and revolving credit asset sales across the US and Europe over 3 years. Defined investor data contracts, API requirements, and multi-investor workflows for 3 external funds.
- Launched Pay Later 2 GO across the US, Germany, and Italy and BNPL Pay Monthly across France, Italy, Spain, Austria, and Australia after cohort analysis identified underserved borrower segments. Drove \$25B in TPV and roughly 20% customer base growth.
- Led BNPL customer research and shipped a UI redesign that shows the full BNPL and credit suite in a single flow. Lifted revolving credit volume 12% and BNPL volume 8% across all products.

Product Manager I, Sezzle Inc. · Third-Party Lender Connectivity

Oct 2021 - Mar 2022

Led customer research, partner discovery, and API integration requirements for third-party lender connectivity. Shipped the first integration MVP and reduced high-frequency UX defects to improve partner flow reliability.

Business Analyst, NewDay USA · Internal Lending Product Launch

Apr 2021 - Oct 2021

Translated executive and business requirements into product specs for offshore engineering and supported the on-time launch of a new internal product.

Portfolio Content Developer Co-Op, Nokia R&D · Computer Vision Asset Localization

Jan 2021 - Apr 2021

Owned vision, PRD, and launch strategy for a computer vision asset localization product. Replaced sensor-based detection and cut sensor cost 52% and infrastructure cost 37% versus the incumbent.

Systems Engineer, Tata Consultancy Services · Product Analysis, APIs, Migration Validation

Dec 2016 - Sep 2019

Acted as product analyst on an internal TCS launch with zero rollbacks. Built RESTful APIs that validated migration of 80M insurance policies and saved \$20K per year.

SELECTED AI PRODUCTS AND PROJECTS

- **Scam Shield** · TypeScript, React, Claude API · github.com/srivatp2-code/scam-shield
Open source consumer AI app that scores inbound SMS, email, and URLs and returns plain English red, yellow, or green risk verdicts. Chose a BYOK and fully client-side architecture so no message data ever leaves the user's browser. Built the scam pattern library, onboarding flow, and risk band UX for non-technical users.
- **Options Flow Intelligence Agent** · Python, Playwright, Claude API
Trading signal agent that scrapes unstructured market flow data and posts ranked daily alerts to Discord across 4 channels. Designed signal ranking logic, alert UX, and reliability checks for repeatable trader workflows.

SKILLS

AI and Machine Learning: LLM applications across Claude, GPT, and Gemini, RAG and hybrid retrieval, prompt engineering, eval design including LLM as judge, deterministic checks, and HITL, model selection, AI guardrails, latency and cost tradeoffs, computer vision

Product: Strategy, roadmapping, discovery, A/B testing, GTM, KPIs and OKRs, platform products, API requirements, regulated product launches, Agile, Scrum, SDLC, stakeholder management

Data and Tools: SQL, Snowflake, Python, Tableau, Power BI, Figma, Jira, Confluence, Git, Postman

EDUCATION

M.S., Information Systems, University of Maryland, Baltimore County · GPA 3.81 / 4.00

Aug 2019 - May 2021
